

SCHEMA THERAPY WT FORENSIC CLIENTS

10-11 NOV 22 SYD
17-18 NOV 22 MEL

LIVE!
LIVE!
LIVE!

The application of Schema Therapy to forensic populations and contexts is a recent innovation having emerged in the mid 2000's. Since this time there has been a steady accumulation of evidence supporting its use in these contexts, assisting practitioners work effectively with the most challenging of patients and making sense of the most inexplicable of offending behaviours.

In these two-day live workshops' participants will learn the key principles of using Schema Therapy for working with the so-called antisocial personalities, mapping offending behaviours, structuring interventions, and maintaining balance in forensic contexts. The workshops are desired to be both informative and practical in terms of providing participants with specific resources, skills, and knowledge that can be immediately applied to their practice and with their patients.
